

Student Guide to OneNote

OneNote can be used within Teams to do your work digitally, submit work and access lesson content. Please read this guide in preparation for increased use.

This guide is taken from Bedford Modern School.

What is...

OneNote?

OneNote is like a digital binder, an online notebook where you can take notes on individual pages, then organize the pages within subject tabs. Because the binder is digital, you can also hyperlink text, embed video and audio, add drawings, insert images, and so much more.

Class Notebook?

A OneNote Class Notebook has three main components:

1. Your own **student notebook**. You are responsible for your own notebook that is viewable only by yourself and your teacher.
2. A **content library** where learning resources can be provided by teachers for students to use.
3. A **collaboration space** for teachers and students, where teachers and students can create or edit content, individually or in groups.

the benefit?

- OneNote offers a **wide range of tools** for all subjects,
- **Easy access** to learning resources,
- It is available on **any device, anywhere, anytime**,
- Collaboration tools allow students to **compare notes** with each other,
- Teachers have access to individual student notebooks, so they can provide students with **more personal feedback**.

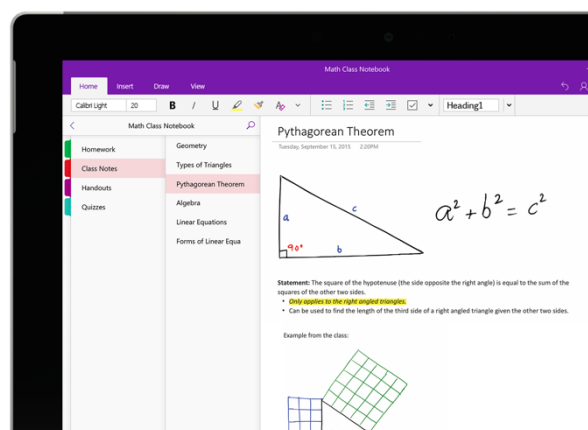

How your teacher might use Class Notebook with you:

Organise your subject content

Your teacher can organize lesson content so that it is easily accessible to you – on any device, anywhere, at any time.

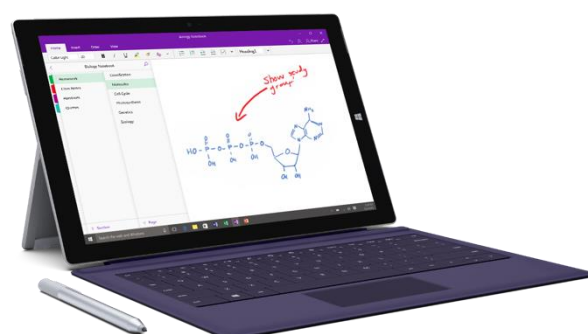

OneNote's powerful search tool can find what you're looking for, even text in pictures or handwriting.

Create and deliver lessons

Teachers are able to create lessons and send them straight to your student notebook, just like handing out worksheets in a classroom. These handouts can even include videos or audio recordings.

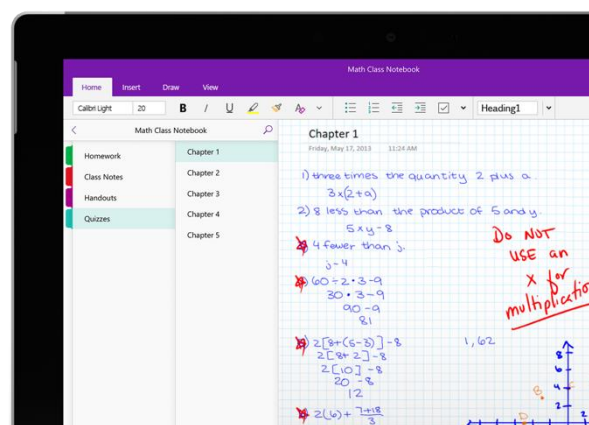

Students work on these handouts, perhaps choosing to use powerful drawing tools to highlight, annotate slides, sketch diagrams, and take handwritten notes.

Provide feedback

Teachers can provide real-time feedback and coaching. Personal support can be typed or written directly into your student notebook.

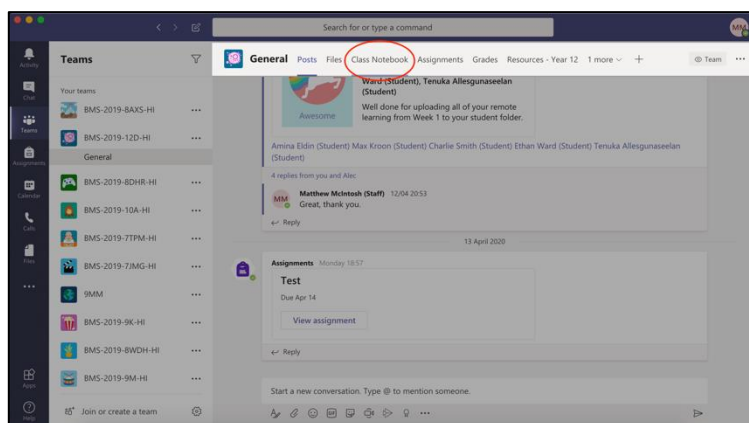

Students can insert 'tags' which ask for help. When teachers search these tags they can give instant feedback to students who are struggling.

Accessing your Class Notebook:

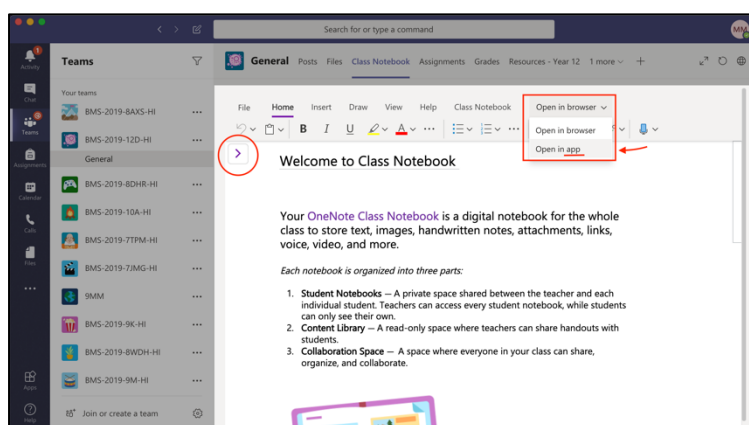

via Microsoft Teams

1. Open [MS Teams](#) (either in your browser or in the app).
2. Select the Team which you want to view the Class Notebook for.
3. Select the 'Class Notebook' tab.

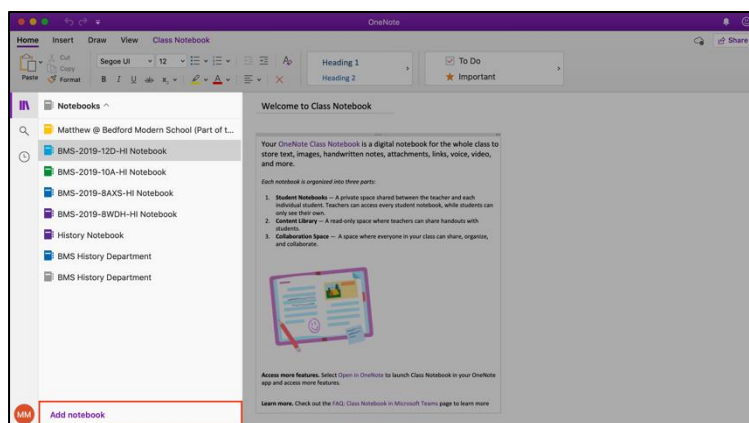

4. The notebook opens, but using the OneNote app is recommended for easier use. This is free for everyone to download.

Click here to download [OneNote](#) or the whole [Office 365](#) package.

5. With the OneNote app open, if your Class Notebook doesn't open automatically along with it, you can use the left panel to add and select any Notebooks that are accessible to you.

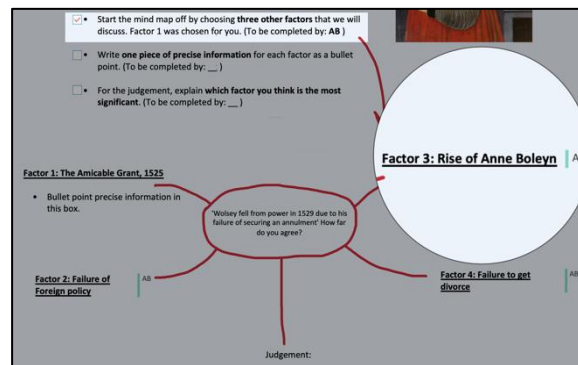

6. You should now have access to all of the Class Notebooks that have been created by your subject teachers.

You can also make your own personal notebooks, but please note that your subject teachers will **not** have access to these, so it is not recommended to use them for your remote learning.

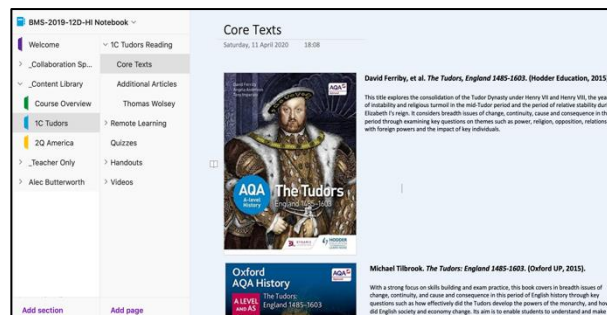

Understanding the notebook sections:

Collaboration Space This is an area for students to collaborate (work together) on projects. Your teacher will give instructions of how and when to use this space.

Any students in your group can add to the page. Initials of the contributor will appear.

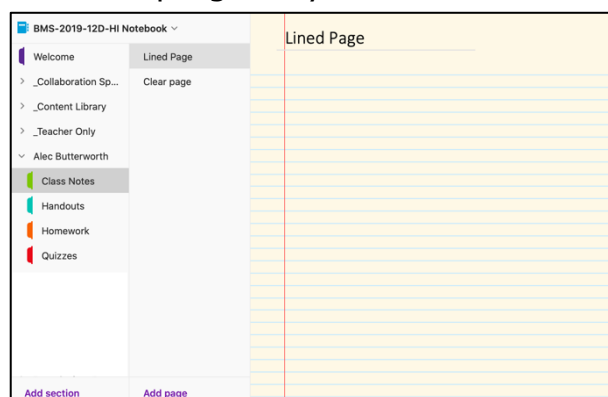

Content Library This area can only be edited by your teacher. It might include lesson instructions, handouts, quizzes, reading, videos, etc.

Student notebook

This is your area to complete any independent work for your subject. Teachers will decide what default sections to include within it, and they can view the progress you make.
